Professional Summary

Software Engineer specializing in end-to-end product development across web, mobile, backend, and cloud infrastructure. Independently designs and builds complete websites and business platforms, including CRMs, and Flutter Android applications from UI/UX and database architecture through deployment and production release.

Experience

Cothon Solutions
Android Developer Intern Dec 2024 – Feb 2025

- Developed Flutter applications, integrated AI capabilities using TensorFlow and Google ML Kit, and improved debugging and testing workflows.
- Collaborated through Git-based version control and code reviews; recognized as Intern of the Year.

E-Tailed Digital India Hyderabad, India
Software Engineering Intern Jan 2026- Feb 2026

- Contributed to application and backend development, gaining hands-on experience with business software and development workflows.
- Converted to a full-time Backend Engineer following the internship.

E-Tailed Digital India Hyderabad, India
Backend Engineer – Full-time Mar 5, 2026 – Present

- Develop backend services, APIs, database integrations, and business application features.
- Build a CRM platform supporting lead management, branch and product/team organization, lead assignment, and executive follow-ups.
- Contribute across the software lifecycle, including implementation, testing, deployment, and infrastructure.

Selected Projects

Daily Express – Dairy Delivery App | Flutter, Supabase, Razorpay, Google Maps *Production, Google Play Store*

- Independently designed and developed the complete Android app, including UI/UX, authentication, product browsing, ordering, location features, and backend integration.
- Integrated payment and delivery workflows, prepared the release, and published the app on Google Play.

Quicko – Ride-Hailing App | Flutter, Supabase, Maps APIs *Production, Google Play Store*

- Independently designed and developed a ride-hailing application, implementing mobile interfaces, core user flows, location-based functionality, and backend connectivity.
- Prepared the Android application for Google Play closed testing.

Multi-tenant CRM Platform | React, TypeScript, Supabase, Cloud Infrastructure *Deployed*

- Develop a complete business platform with a management website and executive mobile app, covering lead imports, team management, assignments, and follow-up tracking.
- Handle interface design, application logic, database integration, deployment, hosting, and infrastructure.

flutter_text_utils | GitHub / Dart *Open Source, pub.dev*

- Published a reusable Dart package for text processing, validation, and Base64 encoding/decoding, with 500+ reported pub.dev downloads.

More Projects: 10+ projects on GitHub, including web applications, mobile apps, and software experiments.

Technical Skills

Languages: Dart, JavaScript, TypeScript, Python, SQL
Web Development: React, Vite, HTML, CSS, Node.js, Express, FastAPI, REST APIs
Mobile Development: Flutter, Android, Play Console, responsive UI, app publishing
Databases: Supabase, PostgreSQL, MongoDB, Firebase
Cloud & DevOps: AWS (S3, CloudFront, EC2), Docker, Git, GitHub Actions, Vercel, Render, CI/CD, deployment and hosting

Education & Achievements

Malla Reddy College of Engineering and Technology 2026
B.Tech in Computer Science and Engineering

Google Solution Challenge (2024) | Smart India Hackathon Participant | 150+ LeetCode Problems Solved
